

Utility-scale solar israel

Utility-scale solar israel

Arava Power is a utility-scale renewables Developer-IPP that pioneered Israeli utility-scale PV in 2007. We develop, own, and operate a multi-GW portfolio of solar energy and energy storage assets in Israel and the USA.

Since the earliest days of the renewable energy industry, Arava Power has been at the forefront of the energy transition, delivering on the promise of clean, sustainable energy to power our planet's future.

We're in for the long haul and are proud of our excellent relationships across the industry. We're honored by the trust landowners, partners and financiers have and continue to place in our abilities.

We are constantly innovating to find increasingly efficient ways of generating, distributing and using energy. We open ourselves up to the outside world, to industrial partners, universities, research centers, startups and clients.

We've raised billions in equity and debt financing for our projects from the leading Israeli and Global financial institutions. We focus on optimizing financial structures to improve long-term project cash flows and risk profiles.

We've been operating PV plants for 15 years and have gotten pretty good at it. Our expertise in streamlining operations and improving system performance long-term has enabled us to increase margins by as much as 50% for operational assets.

We work each and every day to create value in all the contexts in which we have a presence. Our aim is to combine our industrial goals with the socioeconomic development of the areas where we operate. We build solid, positive relationships in order to achieve sustainable and enduring results.
