

Varta battery website

Whether you're driving your very first car, a family vehicle, a car with start-stop functionality, or a highly equipped vehicle with higher energy demands, we will guide you to the right VARTA(R) batteries for your car.

Increasing environmental and safety regulations, more trucks with end-of-frame mounting systems, and more electronic equipment in all applications, will change the market dramatically. Our unrivalled range of VARTA(R) batteries for heavy commercial vehicles is ready to serve the new market requirements.

Powersports cover a huge range of vehicles, including motorcycles, quad bikes, jet skis, all-terrain and utility terrain vehicles (ATVs and UTVs), scooters, snowmobiles and even lawn mowers. You're certain to find VARTA(R) batteries that are made for each of these applications.

The VARTA(R) Professional range is designed to power marine craft such as electric boats, yachts and motorboats, plus all kinds of caravans and motorhomes. For golf carts and similar applications, choose VARTA(R) leisure batteries for exceptional performance and reliability.

And this is what we produce: batteries. In fact, we are one of the biggest producers of batteries and power sources at the highest technological level and the best quality "Made in Germany". But is this really what we do? We at VARTA believe that we serve a higher purpose:

We understand that the best technological advancement is useless unless it serves your needs and the needs of billions of people. Our mission is to serve you and make your life better and brighter. We are proud to be more than just a reliable provider of mobile energy – we are also a trustworthy companion in your life.

VARTA follows a principle: everything we do revolves around people's needs and wishes. In other words, it revolves around you! We make what's important to you our responsibility. And we live up to this responsibility with all our energy.

Every car needs a 12V-battery. Yes, also cars with an electrical engine. Functions like the locking system only work with a low voltage battery. But that's not all. In case the high voltage battery stops working, the 12V battery supplies essential safety features like power steering, brake booster and ABS. For this important job, VARTA offers the Silver Dynamic AGM - a reliable power source fitting all needs of electrical vehicles.

Start-stop technology helps to conserve fuel by automatically switching off the engine every time your car comes to a stop. However, cars with start-stop capabilities put a greater demand on the car battery. That's why VARTA(R) offers car batteries that are specifically designed for start-stop vehicles - such as Silver Dynamic AGM and Blue Dynamic EFB.
