Ville neuss battery testing

The AVL AMA SL is a exhaust measurement system that is revolutionizing emission testing. It is ideally suited to both research and development applications and certification for all types of engines and fuels.

With over seven decades of experience in the mobility industry, we understand the challenges our customers face in reducing greenhouse gas emissions. By using sustainable design and development processes, we are not only helping reduce the CO₂ footprint of all types of powertrains, but we are also keeping affordability in mind for the end consumer.

AVL Emission Test Systems presents the new intelligent, innovative, and intuitive AVL iGENERATION product family, consisting of the AVL AMA i60 exhaust measuring system, the AVL CVS i60 full flow dilution system and the AVL PSS i60 full flow particulate sampler.

AVL iGEM Engine, based on the newly developed AVL iGEM software platform is launched. Also, in the area of exhaust emission test cell automation on engine and chassis dynamometers we are following consequently the AVL iGENERATION product idea.

The new AVL AMA SL exhaust gas measurement systems is presented at the Automotive Testing Expo Europe. The new emission analysis system is characterized by its slim and minimalist system design, very low sample flow rates for highly accurate test results, and increased energy efficiency. Compared to conventional emission benches, the AVL AMA SL is a more economical system that provides most accurate test results with less energy and maintenance costs.
