

Waterless toilets that burn waste

Waterless toilets that burn waste

TinyJohn is the ultimate RV or Van Conversion Toilet. No hassle with composting or emptying a black water tank. Go Anywhere with Ecojohn. The TinyJohn toilets are ideal in RVs, trailers, van conversions and other applications with limited power. The above video showcases an install in a 24ft RV. The old pedal toilet was replaced with the TinyJohn and the customer was able to double up on the fresh water.

No more transport of waste. Living off grid in float cabin accessed only by water added extra labor to this chore. But no more. At age 68 thought the install was easy. Once it was dialed in.. s been a flawless operational jewel of an addition at cabin ! Scott in sales was excellent in providing correct info in choices & lead times for delivery. The Tech team is right there I discovered to answer or help in any manner. These people all rock a 5 star review so they get a 6 star ***** from me !

A waterless toilet is a human waste management system that doesn't use water. It's an eco-friendly alternative to traditional flushing toilets and leverages biological processes or other technologies to reduce water consumption.

Some composting toilets might require a minimum amount of water to work correctly and maintain a clean environment. However, we're talking about low amounts--less than 0.5 gallons of water/flush, with a significant impact on the overall water consumption and bills, compared to traditional toilets.
