

What to do with old aa batteries

What to do with old aa batteries

The best sustainable art supplies are those that limit your use of toxic materials in art-making or reduce your contribution towards the drain on the earth's resources. Some of them will also help to cut your carbon footprint. You can find sustainable portfolios, paint, brushes, paper, easels, etc.

Both brands make different types of crayons, including hard and soft ones, and they also come in various shapes and sizes. You can be sure of finding something that matches your needs at all times while contributing to the overall health of the planet.

Easels are important for holding up your artwork when it is still in progress or when it is time to display the finished project. Unfortunately, not all manufacturers use sustainable wood in making theirs. However, the Richeson brand has stepped into the gap, offering different easels made of lyptus.

Unlike oak, which is the standard wood used in making easels, lyptus doesn't stop growing after it's harvested for use in easel manufacturing. It's also harder than oak, so you aren't losing out on durability by choosing to go the sustainable route. The Richeson Table Top Easel is a popular choice, but there are other types, including the Lobo variant.

Artists use portfolios to distribute some of their best work. This makes them one of the materials they buy up the most. Buying sustainable portfolios ensures you are not contributing to sending more waste to the landfill. The Ecosmart Dura-Tote Color portfolios from Star Products are excellent options to start with when looking for sustainable portfolios. They are made from 100% recyclable materials that also contain recycled post-consumer waste.

Natural Earth Paint is the first place many eco-aware artists will look for dyes, face paints, dyes, and pigments. The pigments (except blue) are listed as earth-derived, which means that they are not toxic to the environment. Using the pigments, you can mix your own paint to get exactly what you need per time and avoid wastage.

For sustainable acrylic paints, Wyland Ecological Art Studio stocks some solvent-free options you can consider. FSC-Rated Pencils It is unfortunate, but pencils are still getting made from forest trees today. However, there are ways you can ensure that you are avoiding manufacturers that are damaging the ecosystem to make their products.

The first tip is to look for FSC Certification when buying your pencils. There are various levels of certification, but ultimately, it is a label that shows that the manufacturer is environmentally conscious and is harvesting wood for their pencils sustainably.

A few brands are selling recycled artist paper, but Strathmore is one of the most popular. Like the 465-8

What to do with old aa batteries

Recycled Hardbound Art Journal, some of their papers contain cotton, hemp, and tree-friendly fibers. Savoir Faire is another brand that offers artist paper made from 100% post-consumer recycled cellulose. For something a bit different, you can look at Legion Paper's handmade products. They are tree and chemical-free, and since the paper is handmade, the production process uses far less energy per ton produced.

Glitter is used to adding some shine to artistic work. Unfortunately, it is not good for the environment since it's made from PET plastic. It can contaminate water and soil in the environment and is also a hormone disruptor in humans and animals. Due to the importance of glitter in art, it's difficult for some people to give up using it entirely, but there are possible alternatives.

Firstly, many brands are selling eco-friendly glitter on the web today to promise that their products are safe for the environment. Granted, verifying some of these claims is difficult as the constituents of the product are often vague. However, brands like Luminosity Glitter have mentioned creating glitter from ethically and sustainably sourced raw materials. The niche is still relatively nascent and brands do seem to still be looking for some stability, so you should know how to spot fake biodegradable glitter when looking to buy some.

An alternative to using any glitter in the first place, while still giving a look and feel a dash of it can bring to any artwork, is to punch holes in old wrapping paper, magazines, cards, and confetti. Some of these are more eco-friendly than others, but it ensures you reuse waste and stay clear of harmful glitter. Punch different colors of these items, and you can add some sparkle to any design. For temporary designs, you can use leaves and flowers to achieve the same goals.
