

Why are the amish not going solar

Why are the amish not going solar

According to Electric Rate, some Amish communities adopted solar as far back as the '90s. In addition to wind turbines on churches and barns, Amish homes may also have solar panels on the roofs. These are connected to batteries that power electric lights, water pumps, and even the occasional washing machine, refrigerator, cash register, or e-bike .

Why the Amish are embracing solar. One reason why solar is becoming increasingly popular among Amish communities is the fire risk of their traditional lighting methods such as kerosene lamps and candles - especially for the elderly and younger members of their communities.

Anabaptist World recently reported that Amish communities are starting to adopt solar as their source of power. It's a long-held misconception that the Amish use no electricity at all. Instead, most of them simply believe that relying heavily on electricity or access to public power grids will tie them too closely to the rest of the world.

Amish barns and solar panels are probably not two things most people think of as going together, but times are changing. Anabaptist World recently reported that Amish communities are starting to adopt solar as their source of power.

It's a long-held misconception that the Amish use no electricity at all. Instead, most of them simply believe that relying heavily on electricity or access to public power grids will tie them too closely to the rest of the world.

Some Amish people have used gas and diesel generators to produce electricity and candles or kerosene lamps to light their homes. However, as solar panel technology improves and prices drop, these generators and lamps are becoming less attractive.

Burning kerosene also comes with severe health risks and can damage the lungs and increase asthma and cancer risks. Exposure to diesel exhaust can also cause serious health conditions like asthma and respiratory illnesses and can worsen existing heart and lung disease.

The Amish approach to electricity is somewhat complicated. On the one hand, almost all Amish groups reject public grid power in their homes. But many Amish do get electric power from a variety of other sources.

Amish attitudes to electricity use vary across different Amish groups. Like with other aspects of their lives, Amish practices may, in fact, change over time. But the vast majority of Amish reject using public power in their homes. There are several reasons for this.
