

Zagreb electric vehicle incentives

Croatia's state fund started receiving applications yesterday at 9 o'clock, and only after two minutes it had to close registration because the requested amount in applications reached the planned limit for incentives.

The interest in incentives was really enormous, so there will certainly be those who will be disappointed because they did not manage to apply, which demonstrates that interest for electric vehicles is higher than this year's budget, the fund said on its website.

For energy-efficient vehicles – which include electric vehicles, plug-in hybrids, hydrogen vehicles, and electric bicycles, a total of EUR 5.8 million has been secured this year. The money is split 50-50 between citizens and companies. A total of 853 applications were received on two calls, and the call for companies was also closed in a very short time.

The biggest change in the program for this year is the application procedure. Due to digitalization prompted by the coronavirus, both citizens and legal entities could apply only through the e-notification system.
